BEAUTY IS THE PURPOSE
ENGINEERING IS THE METHOD

Totem Automobili is an entirely Italian house. Its design, its engineering and its style are born in Treviso, in an atelier that does not build in volume: every motor car is conceived for one person and shaped by hand until form and function become indistinguishable.

Its point of departure is the Italian grand tourer of the 1960s, the purest expression of an era when beauty led the way. Modern technology has given that icon a second life: the proportions endure, while everything beneath them moves forward with today's innovation.

Each commission begins as a conversation and ends as a signature: timeless lines, the finest materials and engineering that answers only to the road.

Italian Gran Turismo

A LEGEND, REBORN

Founded in 2018, Totem Automobili was born of a single conviction: that the purest Italian grand tourer of the 1960s deserved a future, not a museum.

The Totem GT keeps the silhouette that made an icon and redesigns everything beneath it from the ground up. Totem has created a monocoque in carbon fibre joined to aluminium subframes of exceptional strength, an entirely new suspension with double wishbones machined from solid aluminium, and a contemporary powertrain. The result brings the performance and safety of a modern motor car to a timeless shape.

A single platform gives life to two characters, the GT Super with its twin turbocharged V6 and the GT Electric, each built to order and tailored to its owner, from the tone of the paint to the stitching of the seats.

The aesthetics of the past,
the technology of the present.

Concorso d'Eleganza Villa d'Este, 2026

Concurso de Elegancia Costa del Sol, 2026

RECOGNISED WHERE IT MATTERS

In only a few years, the craftsmanship and expertise behind every Totem have earned the house its place at the great gatherings of the automotive world: Monterey Car Week, from The Quail and Motorlux to the Santa Lucia Preserve, Concorso Italiano and the Monterey Motorsports Festival; the Concorso d'Eleganza Villa d'Este and Como Car Week; and the 1000 Miglia Green, where the GT Electric was Guest Car in 2024.

Recognition has followed: the Villa Erba Public Award at Villa d'Este in 2024 for the bespoke GT Electric "Armonia"; runner-up in the Concept Cars & Prototypes class at Villa d'Este in 2026 for the "Rocket" Sport Prototipo; Best in Class and Best of Sound at the Concurso de Elegancia Costa del Sol in 2026.

Analogue instruments

THE BEAUTY OF ITS ERA, THE PACE OF TODAY

The GT Super is the Totem GT in its most visceral form. A twin-turbocharged V6 sits behind the front axle, a six-speed open-gated manual gearbox sends its power to the rear wheels alone, and every input remains mechanical, immediate and direct.

Several drive modes and power-delivery maps shape its temperament, from the full 640 hp to a calm, unhurried pace. Traction control and ABS can each be set across multiple levels and, on request, the dampers too.

Elegant at rest, ferocious when asked.

THE ENGINE

Gloria, a 2.8-litre twin-turbo V6.

THE GEARBOX

Six speeds, selected by hand.

THE VOICE

A stainless-steel exhaust, open or discreet.

GLORIA, A HEART OF ITS OWN

Developed with Italtecnica Engineering, Gloria is a 2.8-litre twin-turbo V6 with its banks at 90 degrees. Under 180 kg and just 450 × 550 × 530 mm, it is among the most compact engines of its kind, and it sits low and well behind the front axle.

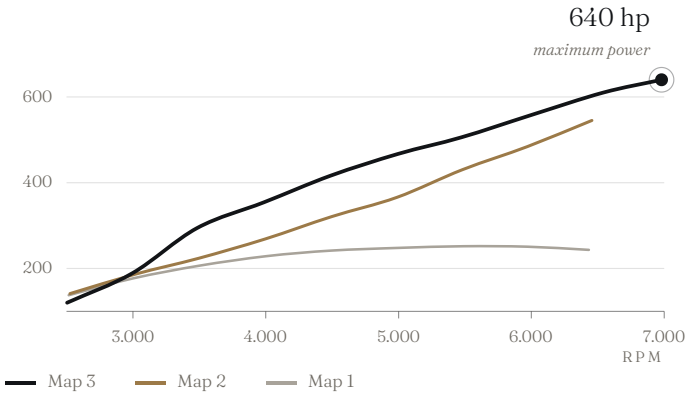

It delivers 640 hp at 7.200 rpm and 655 Nm of torque. Six transparent portholes in the intake plates leave the trumpets of its individual throttle bodies on view, and every engine is tested on the bench and tuned to its owner's request.

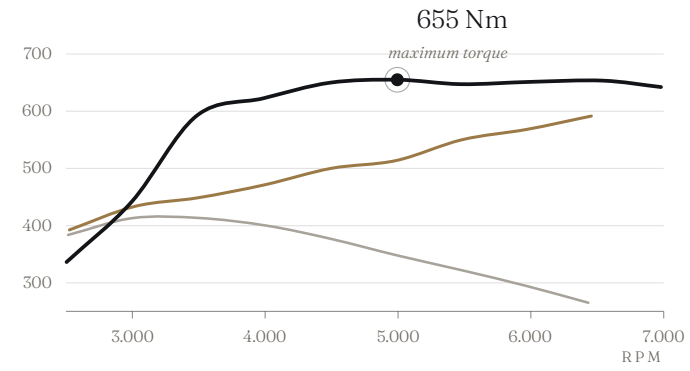

POWER, HP

TORQUE, NM

SIX SPEEDS, BY HAND

The GT Super is driven the way a grand tourer should be: with a clutch pedal and a gate. Its six-speed manual transaxle sits at the rear for balance, with a dry double-disc clutch and a limited-slip differential integrated in the gearbox.

A low-profile billet-aluminium H-plate is standard, its mechanism hidden beneath. On request, a stainless-steel plate, low or raised to reveal the linkage, and a CNC-machined shaft for quicker, more precise changes.

LOW
Stainless-steel plate, close to the console.

RAISED
Stainless-steel plate, raised to reveal the linkage.

TOTEM INDIVIDUAL PROGRAM
On request, a gear knob is designed and made for each client, in billet aluminium, solid wood or hand-blown Murano glass.

A VOICE, TUNED LIKE AN INSTRUMENT

Developed with Capristo, the stainless-steel or titanium exhaust begins with a 3D-printed three-into-one manifold. X-shaped downpipes join the two banks of the engine for a fuller, more harmonious note, and an electronic valve, available on request, opens or closes it at will.

On request, the tailpipes are a Totem Design, 3D-printed in stainless steel and shaped for the GT Super alone. Lighter still, the steering column is made of carbon fibre and titanium, co-developed with Valkyr: lighter and stronger than steel, and on view from the engine bay.

SCULPTED SKIN, CARBON ANATOMY

At the heart of every Totem GT lies a carbon-fibre monocoque developed by Totem and its specialist partners, from raw materials born of decades of aerospace research. Composite sheets are laid into CNC-machined assembly jigs for outstanding structural accuracy.

Validated through finite-element analysis to US and EU passenger-safety requirements, the shell is joined to high-resistance 6082 aluminium front and rear subframes. From high-precision milled moulds, the wide body is rebuilt entirely in carbon fibre, as light as possible and perfectly smooth, its doors reinforced with aramid fibre. This new chassis architecture makes the car 10% larger than the original donor car.

75 kg	US–EU	100 %
CARBON-FIBRE MONOCOQUE SHELL	SAFETY REQUIREMENTS, VALIDATED BY FEA	CARBON-FIBRE BODY PANELS

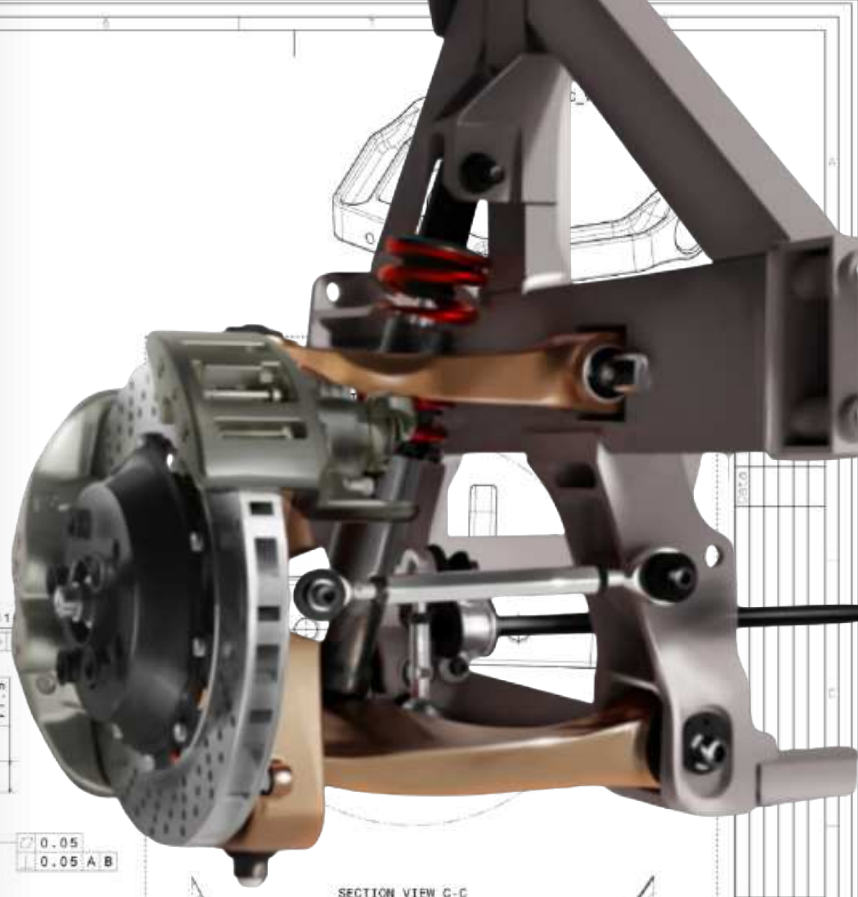

The CNC aluminium subframe, on its own

SUSPENSION SYSTEM

Beneath the precious carbon fibre bodywork lie aluminium subframes, built by welding CNC machined blocks to square section tubes. They carry a double wishbone suspension of Totem's own design, machined from solid aluminium, at both the front and the rear.

The dampers are manually adjustable as standard. For those who ask for more, a higher-performance suspension is available as an option, electronically adjustable front and rear through two dials in the cockpit.

Double wishbone, machined from solid

Coil-over damper and brake

BRAKING, MADE TO MEASURE

Like everything on a Totem, the brakes are chosen for the way the car will be driven. Every GT Super stops on Brembo aluminium monobloc fixed calipers, six pistons at the front and four at the rear, clamping cross-drilled, internally vented discs of 355 × 32 mm and 345 × 28 mm, with an ABS adjustable across multiple settings.

Three Brembo systems then refine that character to the owner's life, from elegant grand touring to the circuit.

SYSTEM	CHARACTER	FINISH
GT-M *Street to sport driving*	The most popular high-performance system: opposed-piston calipers and lightweight two-piece discs, cross-drilled or slotted, for precise modulation and strong resistance to fade.	*Red, black, white or bespoke*
GT-S *Street to sport driving*	Lightweight slotted discs for consistent stopping in every condition, above all on wet and slippery surfaces.	*Dark grey, red Brembo logo, or bespoke*
GT-R *Track-oriented*	Billet monobloc calipers from Formula 1 technology, nickel-plated against corrosion and made to withstand higher temperatures, without the noise or comfort penalties of a race system.	*Nickel, red Brembo logo, or bespoke*

A SIGNATURE IN LIGHT

Round lamps were the face of the great Italian coupés of the 1960s, and they remain the face of the Totem GT. Behind the classic outline, every light is LED.

The result is recognisable at a glance, by day and by night: modern efficiency inside a timeless design.

The outer rings of the headlights and tail lights, like the housings of the tail lights, are machined from solid and finished by galvanic treatment in the metal the client chooses.

FRONT

Headlights with daytime running lights, auxiliary units with position lights, side turn signals.

REAR

Tail lights with position lights and turn signals, third brake light.

FLAVOURS, WITHOUT LIMITS

The colour of a Totem must reflect the spirit of its owner. It may be matched to any sample the client brings to the atelier, or chosen from the Totem catalogue, which ranges from the most historic Italian shades to contemporary tones, in pastel, solid, metallic and mica finishes and in double, triple and quadruple layers of exceptional depth.

INDIVIDUAL COLOURS

Through the Totem Individual Program, the client and Totem Automobili develop together colours and special requests created for a single car and reserved to it.

THE TOTEM CATALOGUE

Printed colours are indicative.

Bullet mirror, satin

GALVANIC JEWELLERY

In counterpoint to the lacquer, every exterior brightwork element is finished in a galvanic tone of the client's choosing: mirrors, badges, door handles, grille shield and hinges, glossy or satin. The same palette may be carried into the cockpit, so that metal speaks one language throughout the car.

Gold *Bronze* *Platinum* *Nickel* *Aluminium* *Gunmetal* *Noir*

EXPOSED CARBON, WOVEN FOR TOTEM

Carbon fibre is not hidden at Totem, it is celebrated. The Carbon Fiber Pack, for the bodywork and for the cabin, is offered in the weaves shown alongside: the classic twill and two textures drawn exclusively for Totem, the herringbone Totem Design GT and the diamond-patterned Totem Design Wave.

Each weave is finished in a glossy or a satin lacquer, and other patterns can be developed to measure for a single client.

On the GT Super the exterior pack extends to the rear diffuser, side skirts and mirror mounts, and beneath the bonnet to the engine-bay cover and plenum.

SIGNATURE WHEELS

Two designs, each machined from billet aluminium as an 18-inch monobloc and available in any finish the client desires, a few of them shown below. Nowhere is Totem's attention to detail more visible.

GTA

A 1960s competition icon, reimagined with a touch of Totem: a ring of round apertures around a deep, machined centre.

Gold

Gunmetal

MILLERIGHE

A thousand fine radial lines: timeless modernity, drawing its inspiration from American heritage.

Aluminium

The machined barrel

AN ANALOGUE SANCTUARY

To take the wheel of a Totem is to enter a space composed with a watchmaker's patience. Switchgear is machined from billet aluminium or formed in carbon fibre and finished by hand, and every hide is cut, stitched and fitted by our artisans.

Nothing here is incidental, not even the components no one will ever see. Instruments are round and legible, controls fall naturally to hand and every surface is chosen to be touched: a cockpit conceived for the pure pleasure of driving, of seeing and of feeling.

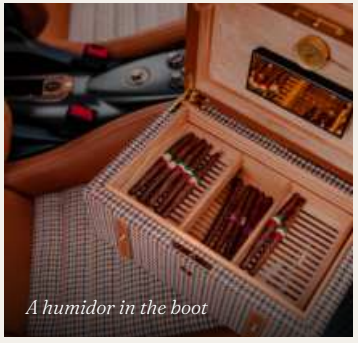

The plaque of the GT Super "Jarama"

TOTEM INDIVIDUAL PROGRAM

A Totem should be as unique as the person who drives it. Through the Individual Program each client works with our design and engineering teams on a car of entirely bespoke technical and aesthetic character. There is no list of what may be asked for: each request is studied, engineered and crafted in our atelier.

TAG Heuer chronographs set into the dashboard, E.Marinella silks and leathers, a humidor fitted in the boot, a key machined from stainless steel, gear knobs and a machined gearbox turret made entirely to measure in any material desired. As everywhere else in the car, every wish can be granted, and the plaque records it.

A humidor in the boot

Ashtray in the door panel

A key machined from stainless steel

Silk inlay, E.Marinella

A bespoke overhead control panel, set in the leather

SEATING

Every Totem seat is shaped around the person who sits in it. Three characters, endless configurations: leathers, cloths, stitching and shells combine freely, a few of them shown here.

DOLCEVITA

Sabelt

The comfort seat, made by Sabelt for Totem to a Totem design: a sculpted shell with the signature horizontal pleats, electrically adjustable in six ways and upholstered to match the cabin, for long journeys.

CLUBSPORT

A carbon-fibre bucket pared back to the essential, with harness openings, deep lateral support and the lowest possible weight.

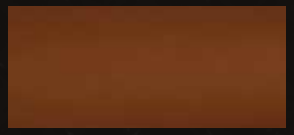

BESPOKE

Through the Totem Individual Program: bespoke inner trims, embroidered ribbons, silks and weaves, shaped around a single client.

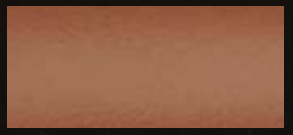

THE FINEST LEATHERS, AND BEYOND

Chosen hide by hide for grain, suppleness and depth of colour, then cut and hand-stitched to measure, Totem leather reaches far beyond the seats. Clients choose from hundreds of colours, leather finishes and stitching styles, combined freely across the cabin.

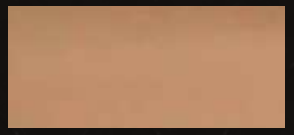

CAMELIA COLLECTION

Medium-grain, balanced and enduring: the foundation of every interior.

EXTRACAMPIONARIO NAPPA

Exceptionally soft, in one hundred colours, for the most demanding schemes.

EXTRACAMPIONARIO PRIMOFIORE

Natural, full-grain hide: the pinnacle of the collection.

STEERING WHEELS

Every Totem steering wheel is built around a core machined from solid aluminium, its structural soul. From there the possibilities multiply: rim materials, leathers and stitching, carbon fibre and wood, spoke and hub finishes, all composed to match the cabin.

TOTEM INDY

Inspired by the racing cars of the past: slender drilled spokes around a billet-aluminium core, and a rim in leather or technical fabric stitched to match the interior.

TOTEM DESIGN

Machined from a single 32 kg block of aluminium on a five-axis CNC for more than thirty hours, its rim inlaid with leather and carbon fibre.

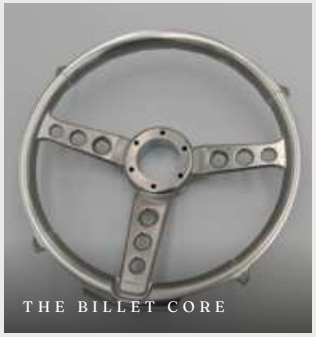

BESPOKE

Through the Totem Individual Program: rims in wood, carbon fibre or any hide, with bands, stitching and spoke and hub finishes designed for one client alone.

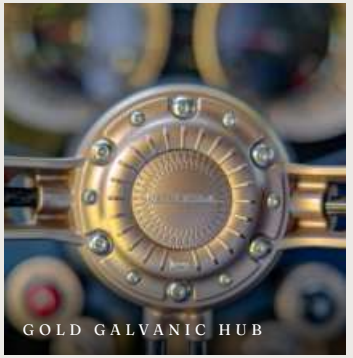

MACHINED FROM SOLID

A 32 kg billet, more than thirty hours of five-axis CNC

WOOD, CHOSEN FOR ITS GRAIN

On the bespoke Totem wheel, solid wood forms the rim, set between sections of hand-stitched leather and fixed with machined studs. Each piece is selected for its figure and finished to suit the rest of the cabin.

The grain, between machined studs and a bronze inlay

SOUND, TAILORED

Music in a Totem is part of the design, never an addition to it. As standard, a radio of vintage look with DAB+, FM and Bluetooth sits within the dashboard among the machined controls; on request, an infotainment unit of the same style adds a 3.5-inch screen with navigation and USB. Every speaker is set behind panels dressed in the same cloth and leather as the cabin.

The Hi-Fi system by Audio Development places two 165 mm woofers in the doors and two tweeters in the A-pillars.

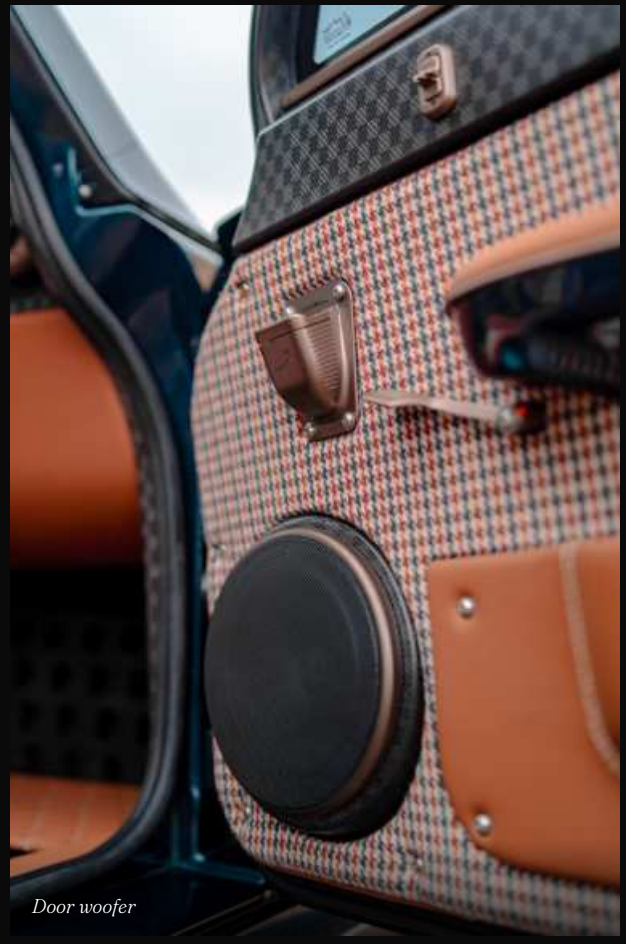

On request, the Subwoofer Extension adds two subwoofers behind the seats, bringing depth and weight to every journey.
